

College Mentorship Management System

Streamlining Faculty-Student Guidance & Academic Progress

CMMS is a digital platform designed to digitize, schedule, and track faculty mentorship across university departments. It replaces fragmented, manual coordination with a single structured system for allocation, scheduling, and progress evaluation.

Why Campus Mentorship Matters

01

Student Success

Direct faculty guidance significantly improves academic outcomes and retention.

02

Research & Career Alignment

Structured mentorship connects students with relevant thesis topics and research grants.

03

Continuous Evaluation

Provides real-time visibility into student progress for university departments.

THE PROBLEM

The Challenges of Traditional Mentorship

01 Manual & Unstructured

Mentorship relies on informal emails, leading to missed office hours and poor record-keeping.

02 Lack of Tracking

Department heads have no clear data on mentorship frequency, meeting outcomes, or student progress.

03 Resource Misallocation

Equal faculty workload distribution is difficult to manage manually across hundreds of students.

NET RESULT

Mentorship quality depends entirely on individual initiative — not institutional design.

Departments are left without the visibility needed to support students at scale, or to recognize mentors carrying disproportionate load.

Our Solution: Smart Mentorship Management
